

Jameson Williams

Sr. Staff Engineer, Whatnot

February '24 – Current, Remote

Supporting our mobile & new DevExp teams. Whatnot is a \$4B live video auctioning platform backed by YC, A16Z & CapitalG. We have ~125 engineers.

Principal Engineer, Reddit

August '21 – September '23, Remote

Responsible for all consumer surfaces in [Reddit's Android app](#), supporting a team of 95 Android devs. Ran [Reddit's Eng Blog](#) with our Branding team. Led a team to re-architect & rebuild Reddit's feeds from the ground up, cutting new product development times in half. Improved our Android app's network reliability [1][2], leading to 1M more feed loads per day. Reworked video playback [3], reducing errors by 65%, creating millions more playbacks.
