Jameson Williams

Staff Engineer, Reddit

August '21 – Present, Remote

Responsible for all consumer surfaces in [Reddit's Android app](). I support a team of 20 Sr. & Jr. Android devs, & run [Reddit's Engineering Blog]() with our Chief of Staff.

Improved our Android app's network reliability [1][2], leading to 1M more feed loads per day. Reworked our video playback [3], reducing errors by 65%, leading to millions more playback sessions. Argued a business case to buy M1 MacBooks for the mobile dept., which saved us millions in recovered productivity. [4]

Senior SDE, Amazon

July '16 – July '21, Seattle, WA

L6 / tech lead for Alexa's Android app and AWS' Android SDK. Added the "ask Alexa" voice functionality to the [Alexa Android app]() [5]. Shipped AWS' current [production Android library]() [6]. Shipped AWS Systems Manager service [7].

Software Engineer, Intel

July '10 – July '16, Portland, OR

Various mobile & embedded roles in Intel Labs, Mobile & Maker depts. Shipped x86-based Orange San Diego phone [8]. Built a novel Android phone w/ all-around touch sensitivity. Maintained SW for Intel Curie platform, shown at Xgames [9], CES [10], Dockercon, Maker Faire, etc.

Objective

Seeking a Principal or Sr. Staff role at a name brand software company. We might be a good match if you're mobile-heavy, remote-first, and committed to leading the industry in DE&I.
